as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em.; EMBL; Sw.; SwISSPROT; Tr.; TREMBL; Wp.; WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1. constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr1
RPII-978IIS is from the library PRCI-11.4 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         132080 caddaaaacdadaarddcacrdcrrcrdaadaacrdrcrrcrcrcrraartcacarc 132139

Submitted (16-007-2002) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries:

On Oct 24, 2002 this sequence version replaced gi:18121511.

During sequence assembly date is compared from overlapping clone version together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-erranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >=
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AL606804 185467 bp DNA linear PRI 23-OCT-2002 Human DNA sequence from clone RP11-978115 on chromosome 1, complete sequence.

181 strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1000 bp mRNA linear EST 12-MAR-2002

(ggccattatggcc); Double-stranded cDNa was prepared from cell line RNA. 5' and 3' adaptors were used in cloning as follows: 5' adaptor sequence: 5'-CACGGCCATTATGGCC-3' and 5' adaptor sequence: 5'-CACGGCCATTATGGCC-3' and 5'-ATTCTACAGGCCGACACAG-dT (30) BN-3' (where B = A, C, C, or G and N = A, C, G, or T). Average insert size 1.65 kb (range 0.9-4.0 kb). 14/15 colonies concained inserts by PCR. This library was enriched for full-length clones and was constructed by Clontech Laboratories (Palo

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         90
                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7737-ABR7072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
 detection reagent for detecting 1000 or more for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3 AsnTyrLeuleuArgLysLeuSerCys---LeuGlyGluAsnGlnLysLysProLysLys

The present invention describes a composition which comprises two antisense oligonucleotides. The first oligonucleotide is specific for a cytoplasmic oncogene or proto-oncogene selected from ras, raf, EGF-1, c-fins, c-ros, c-kit, c-met, c-trk, c-src, c-abl, bor-abl, c-fgr and c-yes. The second oligonucleotide is specific for a nuclear oncogene or proto-oncogene selected from myc, jun, c-ts, c-fos, c-myb, B-myb, c-rel, c-vay, C-ski, c-spi, cyclin D1, PML/RAR alpha, AML1/MTG8, E2A/prl and ALL-1/AF-4. The composition is used for treating cancer. The combination of antisense oligonucleotides has synergistically enhanced ability to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                68

AAA09303-09 were isolated in a modified yeast two hybrid system using NIK1 protein as "bait". These are known sequences which encode NIK1 interacting proteins. The invention concerns purified complaces of a NIK1 protein-interacting protein, where the interacting protein is chosen from TrKA, protein phosphatase lalpha, 14-3-3epsilon, alpha-tropomyosin, vimentin, p0071, Ini-1, IP-1, IP-2, IP-3, IP-4, or IP-5. NIK1 (also referred to as Nek2) is a human homologue of the Aspergillus nidulans microtic regulator, NIWA kinase. NIK1 is a serine/threonine-specific kinase and is thought to play a key role in cell-cycle events leading to the onset of mitosis. The complexes, their derivatives and NIK1 or NIK1-IP protein and DNA sequences, etc. are useful for treating or preventing a disease or disorder involving aberrant levels of the complex or protein. Such disorders include cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                          376

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a comprise the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal cubjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of pain and a pharmaceutical composition comprising the one or more confound that regulates its activity is useful for preparing a medicament for treating pain and spared nerve injury (SNI) in an animal (e.g. gene conducted sequence presented is a rat DNA (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The specification) but was obtained in electronic form directly from WIPO at the conduction in the conduct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              343

The invention relates to 592 new human secreted polypeptides useful for diagnosing, treating or preventing e.g. immune disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, inflammatory conditions, respiratory disorders, cancers, CNS disorders, inflammatory accorders, or polypeptides comprising an amino acid sequence at least 55% identical to the new sequences. The polypeptides, antibodies or antibody fragments that bind to the polypeptides, nucleic acids encoding the polypeptides, agonists or antagonists that binds to the polypeptide, are useful in preparing diagnostic or pharmaceutical compositions for diagnosing, treating or preventing an e.g. immune compositions for disorders (e.g. inflammatory bowel disease, nephritis or Crohn's disease), respiratory disorders (e.g. asthma and allergy), cancers (e.g. gastric, ovarian or lung cancer), CNS disorders (e.g. parkinson's disease or Alzheimer's disease), and cardiovascular disorders (e.g. atherosclerosis or injury), neurodegenerative cardiovascular disorders (e.g. atherosclerosis or myocarditis). The cardiovascular samples, in forensic blooby, and as hybridization or antisense DNA or RNA, in gene expression through triple halix formation cor antisense DNA or RNA, in gene therapy, for identifying individuals crombs and the polypeptides are useful for as molecular weight markers on sodium dodecyl sulfate-polyacrylamide gel electrophoresis (SDS-PAGE) corrections to proper antibodies, for testing biological activities, and so the proper account of the control or antisense antibodies, for testing biological activities, and as proper account of the control or antisense antibodies, for the control or antisense antibodies, for the control or account of the control or antisense antibodies, included the control or antisense antibodies, for the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   treating or preventing neural disorders, immune system disorders, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, proliferative and/or cancerous diseases. This sequence corresponds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         to a gene encoding one of the polypeptide of the invention. Note: The sequence data for this patent did form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples indicates the of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to an isolated polypeptide or human secreted protein. The polypeptides, nucleic acid molecules, antibodies or their fragments, and agonists or antagonists that bind are useful for preparing a diagnostic or pharmaceutical composition for diagnosing or treating allergic or asthmatic disorders. The polypeptide is also useful for identifying a binding partner by contacting the polypeptide with a binding partner, and determining whether the binding partner increases or accidence are also useful for detecting, preventing, diagnosing, prognosticating, treating or ameliorating inflammatory disorders neoplastic diseases, wound healing and disorders of epithalial cell proliferation, immune disorders, cardiovascular disorders, blood-related

             disorders. The nucleic acids are also useful for chromosome identification, radiation hybrid mapping or long-range restriction mapping, as molecular weight markers, or as hybridization or diagnostic probes. The polypeptides and antibodies are useful for providing immunological probes for differential identification of the tissues

thrombocytopenia), allergic reactions including asthma or eczema, inflammatory disorders (e.g. ischaemia-reperfusion injury, inflammatory bowel disease or Crohn's disease), neurodegenerative disorders (e.g. Alzheimer's disease or Parkinson's disease), cardiovascular disorders (e.g. atherosclerosis, myocarditis), infectious diseases (bacterial, fungal or viral infections including HIV/AIDS), or wound healing and disorders of epithelial cell proliferation. The nucleic acids are also useful for chromosome identification, radiation hybrid mapping or longrange restriction mapping, as molecular weight markers, or as hybridization or diagnostic probes. The polypeptides and antibodies are useful for providing immunological probes for differential identification of the tissues immunohistochemistry assays. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

the invention transfer to a nover number section prolypeptical completed defined sequence given in the specification. The polypeptide, nucleic acid molecule, antibody, agonist or antagonist of the invention may be useful for preparing a composition for diagnoshing or treating a haemopoietic or haematologic disorder such as anaemia, autoimmune disorders such as rheumatologic disorder such as anaemia, autoimmune disorders such as rheumatologic disorders inflammation, Grave's disease, neurodegenerative disorders including Parkinson's disease and Alzheimer's disorders including Parkinson's disease and Alzheimer's atherosclerosis or cancer, as well as bacterial, viral, fungal or atherosclerosis or cancer, as well as bacterial, viral, fungal or parasitic infections. The polypeptide any also be used during gene the polypeptide with a binding partner and determining whether the binding partner increases or decreases the activity of the polypeptide. The current sequence is that of the human secreted protein-related DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CAAGGAGTGGAGCACAGAGCCGACACAAGAACACAAGAAGAGGAGGGGCCAGAAA 691

```

This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAZ24802) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 95 novel genes and their fragments (nucleic acid sequences: AAZ24811-Z24807; amino acid sequences AAY41308-Y41404) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pash cological conditions can be diagnosed by determining the amount of the pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the polynucleotides, based on which tissues they are most highly expressed in the new polynucleotides. (see AAZ24811 for described uses)

a diagnostic or pharmaceutical composition for diagnosing, or treating cancer or other hyperproliferative disorder, New human secreted proteins and nucleic acid molecules, useful for asthma, allergies or AIDS. preventing preparing

Claim 9; SEQ ID NO 322; 3205pp; English

The invention relates to novel genes ADA39629-ADA40565 and proteins ADA40566-ADA41501 for human secreted proteins, useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The polypeptides, nucleic acid molecules, antibodies or their fragments, and agonists or antagonists that bind to the polypeptide are useful for preparing a diagnostic or pharmaceutical composition for bolypeptides and nucleic acid molecules are also useful for detecting, proynogosticating, treating or ameliorating cancer protein prognosticating, treating or ameliorating concerdisoreter hyperproliferative disorders including neoplasms, autoimmune disorders (e.g. diabetes, rheumatonia anticimmune through anticipal concerdisoreters (e.g. diabetes, rheumatonia anticipal concerdisoreters) erythematogus, multiple sclerosis, autoimmune thyroiditis or haemolytic

           forensics, gene mapping, medical imaging, identification of mutational responsible for genetic disorders or other traits, assessing biodiversity and producing many other types of data and products dependent on DNA and amino acid sequences. They are also useful for preventing, treating or ameliorating medical conditions, such as cancer, neurodegenerative disorders (e.g. Parkinson's disease, Alzheimer's disease), lymphoid cell periodontal disease, liver fibrosis, infections (e.g. viral, fungal or bacterial) or autoimmune diseases (e.g. diabetes, atopic dermatitis). Sequences ABX04986-ABX0531 represent human polymucleotides of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied by the Buropean Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ||||||||:::|||||||

The invention comprises the amino acid and coding sequences of human secretory (SPTM) proteins. The SPTM DNA and amino acid sequences are secretory (SPTM) proteins. The SPTM DNA and amino acid sequences are useful for transfer or confering disease or condition associated with the expression of functional SPTM. The SPTM DNA sequences are useful for somatic or combined immunodeficiency). The SPTM DNA sequences are also useful in providing protection against intracellar parasites (e.g. fungal Compared in for diagnosing cell proliferative disorders, cancer, immune disorders (e.g. ALDS), neurological disorders (e.g. parkinson's disease), motor neuron disorders, demyellarting diseases (e.g. multiple CC disease), motor neuron disorders, demyellarting diseases (e.g. multiple CC disease), motor neuron disorders, peripheral neurous system disorders, cancer, controskeletal disorders, peripheral neurous system disorders, dermatomyositis and polymyositis, myasthenia gravis, and mental disorders (e.g. Tourette's syndrome). CDNA sequences ABL999146 - ABL99929
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polynucleotide sequences encoding human secretory proteins useful for gene therapy of e.g. genetic deficiency disorders, cancers, and diseases caused by intracellular parasites.

response in a patient. The protein can also serve as a target that modulate gene expression or activity and as an antigen to raise polyclonal or monoclonal antibodies. (Il) is useful for identifying agents that modulate expression of the protein or agents, such as agonists or antagonists. The agonists or antagonists are useful for modulating biological activity and function of (II) and thus are useful for alleviating disease conditions such as allergic hypersensitivity, seasonal rhinitis, asthma, urticaria, atopic dermatitis or mastocytosis

WPI; 2003-371981/35 P-PSDB; ADC31731 New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet discrders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or

Claim 1; SEQ ID NO 842; 1185pp; English.

The invention relates to 971 novel human cDNA sequences (ADC29919-CDC3089) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the crecombinant production of a polypeptide of the invention; an antibody adjainst a polypeptide of the invention; an antibody polypeptide of the invention; and methods of invention further discloses methods of the invention. The ameliorating a medical condition; kits comprising polymucleotide probes invention further discloses methods of peventing, treating or ameliorating a medical condition; kits comprising polymucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention. The ameliorating a medical condition; kits comprising polymucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention. Corresponding to the compassion of conting sequences corresponding to the connected by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC32622) and the polypeptides encoded by the contigs (ADC326222) and the polypeptides encoded by the contigs (ADC326222) and the polypeptides encoded by the contigs (ADC326222) and the polypeptides of also used for trea ftp.wipo.int/pub/published\_pct\_sequences.

WPI; 2002-508560/54. P-PSDB; ABB77569 Novel isolated nucleic acids that are differentially expressed in mast cells in patients with allergic hypersensitivity, encoding proteins associated with mast cell regranulation and allergic hypersensitivity.

Claim 1; Page 95-97; 119pp; English.

The invention relates to isolated nucleic acid (ABN81319-ABN81324), corresponding to genes differentially expressed in mast cells following activation or in patients with allergic hypersensitivity disease, (I) that encodes proteins (ABB7756-ABB77575) (II) or a protein fragment of (II) if at least 6 amino acids. (II) is useful for identifying binding partners. (I) or (II) is useful for diagnosing or treating a disease state (e.g. allergic hypersensitivity, seasonal rhinitis, asthma, urticaria or atopic dermatitis or mastcoytosis) in a subject which involves determining the level of expression of (I) or (II). A computer system, comprising a database containing information identifying the expression level in a tissue or at least one mast cell of (I), is useful for presenting information to identify the relative expression level of (I). (II) is used as a marker to detect, diagnose or identify an allergic

Sequence 1, Application US/10005907

Publication No. US20030166881A1

GENERAL INFORMATION:

APPLICANT: Union Chimique Belge, S.A.

APPLICANT: No. US20030166881Alka, Karl

APPLICANT: Pirozzi, GENEGORY

APPLICANT: Einstein, Richard

TITLE OF INVENTION: NOVEL GENES ASSOCIATED WITH ALLERGIC HYPERSENSITIVITY AND MAST

TITLE OF INVENTION: ACTIVATION

FILE REFERENCE: 053529-5005

CURRENT FILING DATE: 2001-12-07

NUMBER OF SEQ ID NOS: 13

SOFTWARE: Patentin Version 3.1

SOFTWARE: Patentin Version 3.1

SEQ ID NO 1

LENGTH: 3762

TYPE: DNA

ORGANISM: Homo sapiens
